Questions about your Amazon Web Services (AWS) account

AWS account basics
1. What is the AWS region where you would be deploying your infrastructure?
2. Is this region required or can it be changed?

AWS network modes
1. Will you use an existing AWS account or create a new AWS account?
2. If you will use an existing AWS account, in your region, do you have EC2 Classic in network modes or a default Virtual Private Cloud (VPC) defined?

VPC requirements
In your region, do you still have a quota to create a new VPC?

AWS account policy limitations
1. Do your service control policies (SCP) limit external access?
2. Can your AWS account access the Private Computation resources located in the Elastic Container Registry (ECR) and S3?

Security credentials
Are you using AWS temporary security credentials (e.g., AssumeRole)? If so, what is the minimal length of the required token?
Note: a minimum 12 hour expiration length for the temporary credentials of the Assumed Roles is required.
